

SPEAKER BIOGRAPHY

Leanne Mallini

***Director, Quality Systems – Product Stewardship
Analog Devices***

Leanne is responsible for leading Analog Devices' Product Stewardship program within the Quality Systems group, which includes supporting automotive customers with IMDS registrations and developing standardized reporting for its integrated circuit component products. Starting out as an analytical chemist for high purity chemical distribution to Fabs, Leanne has led multiple Quality and Environmental initiatives for several companies within the semiconductor industry. This has included quality improvements in Facilities deliverables of chemicals, gases, ultra-pure water, and environmental conditions to factories, and program management of Quality, Environmental and Safety Management System Standards activities and certifications (ISO/TS/OHSAS). Leanne's current position has brought her full circle from working with raw materials and manufacturing support processes to the final product level, to maintain and validate end-product compliance in the always-evolving regulatory landscape. RoHS, REACH and other applicable EU Directives, Reporting Methodology (IPC1752, IEC62474, IMDS and...SCIP), in addition to Responsible Mineral Sourcing are among the product environmental activities supported by Leanne and the Analog Devices team. Outside of work and primary focus going to her family, Leanne enjoys hobbies of upland bird dog training and spending time with her two horses.
